Figure 1: Adjusted risk ratios for health outcomes by frequency of school-based racism among US high school students, 2023 YRBS ($N = 18,286$). Risk ratios from logistic regression computed via simulation from the variance-covariance matrix (King et al, 2000), adjusting for sex, age, race/ethnicity, English language proficiency, and grades. Shaded bands indicate 95% confidence intervals. Reference category is Never.
